NATIONAL REGISTER

OF

SCIENTIFIC AND TECHNICAL PERSONNEL

IN INDIA

VOL. I - ENGINEERS

PART II

OCTOBER 1950

COUNCIL OF SCIENTIFIC & INDUSTRIAL RESEARCH

NEW DELHI

GENERAL INTRODUCTION

NATIONAL REGISTER OF SCIENTIFIC AND TECHNICAL PERSONNEL IN INDIA

The increasing recognition of the role of science in the promotion of national welfare, and the two wars which utilized in an abundant measure and in a spectacular manner a large variety of scientific talent and skill, have spotlighted the scientist who was hitherto content to work in comparative obscurity, and brought him into the public view. It is now realised that the application of science on the scale necessary for social and economic development demands large number of workers, and not only should all the trained personnel available be efficiently and effectively utilized, but talented young men and women should be sought out wherever they exist, and trained to undertake the many tasks awaiting attention.

It is the appreciation of this position that has led to a stock taking of scientific personnel in various countries all over the world as an essential pre-requisite for assessing qualitatively and quantitatively the available man-power resources in each country and for formulating plans of training the personnel required for research and development. Thus in the United Kingdom, the collection of data relating to numbers and qualifications of scientists and technologists was undertaken under the supervision of the Royal Society of London in 1939. In the following year, the compilation of a National Register of Scientists was undertaken in the United States of America. In India, the demand for taking stock of the man-power resources was voiced by the delegates attending the 1947 session of the Indian Science Congress (Delhi). In August 1947, the Government of India appointed the Scientific Man-power Committee with Dr. Shanti Swarup Bhatnagar as Chairman, and included among the terms of reference to the Committee, "The maintenance of a register of scientific and technical personnel to facilitate their utilization to the best advantage". The work of compiling the register was later entrusted to the Council of Scientific and Industrial Research.

The National Register, which will be periodically revised and brought up-to-date, will provide a continuous census of the scientific man-power of the nation. It will be of assistance in: (*a*) the effective utilization of scientific talent, (*b*) assessing the gaps in the growth of science and technology, (*c*) supplying service personnel to industry, (*d*) finding alternative personnel in the prosecution of team work, (*e*) provision of personnel for educational and research institutions, and (*f*) keeping check on the drift of technical personnel to administrative departments. For fulfilling these purposes, it is necessary that the Register should be complete and comprehensive.

Appeals have been frequently issued in the past, requesting the scientists and technicians of the nation to co-operate in the compilation of the Register. The Hon'ble Shri Jawaharlal Nehru recently said:

> *The Government of India have at present under consideration the report of the Scientific Man-Power Committee appointed in April 1947, to advise on the best method of utilizing and augmenting the scientific man-power resources of the country. A basic recommendation of the Committee, which the Government have accepted, is that immediate steps should be taken to prepare a roster of scientific talent that is now available. The necessity of such a roster is obvious.....I appeal to all persons in India possessing degrees or diplomas in Science to send complete information about themselves such as age, permanent and present addresses, their scientific qualifications, research and industrial experience, their present occupations, the nature of the research work, if any, they are engaged upon, etc.*

So far, the response to the appeal has not been as satisfactory as it should have been. The efforts to collect the information, however, continue, and the Council have undertaken the responsibility of publishing the data as collected in a series of volumes. It is earnestly hoped that scientists and technicians would respond to the call of the Prime Minister and supply the needed information so that this national undertaking in which the Council is now engaged, may be completed satisfactorily and expeditiously.

S. S. Bhatnagar

(S. S. BHATNAGAR)
Director, Scientific & Industrial Research.

INTRODUCTION

The compilation of the National Register has been undertaken by the Council of Scientific and Industrial Research, under the direction of Government of India, to give effect to the recommendations of the Scientific Man-Power Committee. The first part of the Volume 1 containing particulars of Engineers was published in August 1949. The present publication is the second part of the first volume and contains the names of engineers—civil, electrical, mechanical, chemical, mining, marine, automobile, aeronautical and communication—who furnished particulars for registration after the issue of the first part, *i.e.*, between September 1949 and October 1950.

Many communications have been received from members of the engineering profession expressing their appreciation of the manner in which the information is assembled and arranged, paying tribute to its usefulness as a guide to the engineering personnel in India. This point had already been stressed by Dr. S. S. Bhatnagar, who, in his Foreword to the first part observed: "A census of scientific and technical personnel available in this country should be looked upon as an essential pre-requisite for the proper allocation and optimum utilization of trained manpower for nation building activities . . . . The classified information printed in the volumes should be of immense value in assessing the trained national manpower and in harnessing it to constructive ends."

It has been the endeavour of the Council to make the National Register complete and comprehensive. It is hoped that those who have not registered themselves so far, would do so now and help in making this compilation exhaustive.

I desire to express my deep gratitude to Dr. Shanti Swarup Bhatnagar for giving me an opportunity to participate in this national undertaking. I take this opportunity to thank the staff who helped me in this compilation and cheerfully shouldered the work of collecting, checking, arranging, editing and printing. Thanks to their efforts the compilation has attained the status of a reference volume.

C.S.I.R.,
P-Block, Raisina Road,
New Delhi.

R. G. KHALSA.

NOTE TO THE READER

1. Names are arranged alphabetically according to surnames, and under identical surnames according to first names. If both the surname and the first name are identical, names are arranged according to the second name.

2. The information given in the Register has been carefully abstracted from replies to the questionnaire furnished by the individuals themselves. The Council of Scientific and Industrial Research assumes no responsibility for the correctness of statements published.

3. The information holds good up to the date of the replies furnished by individuals.

4. Information relating to incomes and remuneration has been withheld at the request of a large majority of persons listed.

5. In arranging the information, the requirements of Government departments, institutions, industry and other employers have been taken into consideration. The compilation provides information on the qualifications and careers of qualified personnel.

6. The names of technical personnel listed in this volume have been classified according to categories in which the persons consider themselves to be specialists. The same name may appear in more than one category if qualifications and experiences warrant multiple entries.

7. It is not claimed that the names of all the Engineers have been registered, and more names would appear in a supplement to be issued shortly.

TABLE OF ABBREVIATIONS

A Am I E E	Associate of the American Institution of Electrical Engineers
A C G I	Associate of the City and Guilds of London Institute
A F I Ae Sc	Associate Fellow of the Institution of Aeronautical Sciences, U S A
A F P W I	Associate Fellow of the Permanent Way Institute
A F R Ae S	Associate Fellow of the Royal Aeronautical Society
A G M S	Associate of the Geological, Mining and Metallurgical Society of India
A H R B	Associate of the Highway Research Board, U S A
A I I Sc	Associate of the Indian Institute of Science, Bangalore
A I S M	Associate of the Indian School of Mines, Dhanbad
A Inst P	Associate of the Institute of Physics
A K C	Associate of the King's College, London
A M A E	Associate Member of the Association of Engineers
A M Am I E E	Associate Member of the American Institution of Electrical Engineers
A M Ae S	Associate Member of the Aeronautical Society
A M Am I R E	Associate Member of the American Institution of Radio Engineers
A M Brit I R E	Associate Member of the British Institute of Radio Engineers
A M Ch E	Associate Member of Chemical Engineers, Jadavpur
A M C T	Associate Member of the College of Technology, Manchester
A M E E.	Associate Member of the Electrical Engineers, Jadavpur
A M G I	Associate Member of the Mining, Geological and Metallurgical Institute of India
A M I H E	Associate Member of the Institution of Highway Engineers, London
A M I Auto E.	Associate Member of the Institution of Automobile Engineers, London
A M I B A E.	Associate Member of the Institution of British Agricultural Engineers
A M I Brit E	Associate Member of the Institution of British Engineers
A M I C E	Associate Member of the Institution of Civil Engineers
A M I Ch E.	Associate Member of the Institution of Chemical Engineers, London
A M I E	Associate Member of the Institution of Engineers, India
A M I E E	Associate Member of the Institution of Electrical Engineers, London
A M I E I	Associate Member of the Institution of Engineering Inspection, London
A M I E S B	Associate Member of the Institution of Engineers and Ship Builders, Scotland
A M I E T	Associate Member of the Institute of Engineering Technology, London
A M I Loco E	Associate Member of the Institute of Locomotive Engineers, London
A M I Mech E	Associate Member of the Institution of Mechanical Engineers, London
A M I Min E	Associate Member of the Institution of Mining Engineers, London
A M I N A	Associate Member of the Institution of Naval Architects, London
A M I P E	Associate Member of the Institution of Production Engineers, London
A M I P T	Associate Member of the Institution of Plastic Technology, London
A M I R E	Associate Member of the Institution of Radio Engineers, London
A M I R S E	Associate Member of the Institution of Railway Signal Engineers
A M I S E	Associate Member of the Indian Society of Engineers
A M I S P	Associate Member of the Institution of Sewage Purification, London
A M I San E	Associate Member of the Institution of Sanitary Engineers, London
A M I Struct E	Associate Member of the Institution of Structural Engineers, London
A M I W	Associate Member of the Institution of Welding, London
A M M E	Associate Member of the Mechanical Engineers, Jadavpur
A M M E A.	Associate Member of the Mechanical Engineers Association, India
A M S E	Associate Member of the Society of Engineers, London

AMTI	Associate Member of the Technological Institute of Great Britain.
AMTPI	Associate Member of the Town Planning Institute
Appr	Apprentice
ARAeS	Associate of the Royal Aeronautical Society
ARAeSI.	Associate of the Royal Aeronautical Society & Institute, London
ARIC.	Associate of the Royal Institute of Chemistry
ARSM	Associate of the Royal School of Mines, London
ARTC	Associate of the Royal Technical College, London
ASAE	Associate of the Society of Automotive Engineers, USA
BCE	Bachelor of Civil Engineering
BChE	Bachelor of Chemical Engineering
BE	Bachelor of Engineering
BEE	Bachelor of Electrical Engineering
BME	Bachelor of Mechanical Engineering
BOT.	Board of Trade Engineers Certificate
BSc	Bachelor of Science
BSE	Bachelor of Science in Engineering
CE	Civil Engineering
CPE	Certificate of Proficiency in Engineering, Glasgow
CPET	Certificate of Proficiency in Electrical Technology
CWINC	Central Water-power, Irrigation and Navigation Commission
DCE	Diploma in Civil Engineering
DEE	Diploma in Electrical Engineering
DIC	Diploma of the Imperial College of Science & Technology, London
DIIC	Diploma of the Indian Institute of Science, Bangalore
DME	Diploma in Mechanical Engineering
DRTC	Diploma of the Royal Technical College, Glasgow
DSc.	Doctor of Science
DipSES.	Diploma Subordinate Engineering Service
FGMS	Fellow of the Geological, Mining and Metallurgical Society of India
FIAA.	Fellow Architect Member of the Incorporated Association of Architects and Surveyors, London.
FIAS	Fellow Surveyor Member of the Incorporated Association of Architects and Surveyors, London
FICS.	Fellow of the Indian Chemical Society
FIHE	Fellow of the Institute of Highway Engineers, London
FIIA	Fellow of the Indian Institute of Architects
FInstP	Fellow of the Institute of Physics
FNI	Fellow of the National Institute of Sciences, India.
FPWI.	Fellow of the Permanent Way Institute
FRIBA.	Fellow of the Royal Institute of British Architects
FRIC	Fellow of the Royal Institute of Chemistry of Great Britain and Ireland
FRICS.	Fellow of the Royal Institute of Chartered Surveyors
FRSanI	Fellow of the Royal Sanitary Institute
G	Government Employee
Grad I Auto E	Graduate of the Institution of Automobile Engineers, London
Grad IEE	Graduate of the Institution of Electrical Engineers, London
Grad I Loco.E.	Graduate of the Institution of Locomotive Engineers, London.
Grad I Mech E	Graduate of the Institution of Mechanical Engineers, London
Grad IPE	Graduate of the Institution of Production Engineers, London
Grad M Brit I.R.E	Graduate Member of the British Institute of Radio Engineers
Grad M I Auto E.	Graduate Member of the Institution of Automobile Engineers, London.
Grad MICE	Graduate Member of the Institution of Civil Engineers, London
Grad M I Ch E.	Graduate Member of the Institution of Chemical Engineers, London
Grad MIEE	Graduate Member of the Institution of Electrical Engineers, London
Grad M I Mech E.	Graduate Member of the Institution of Mechanical Engineers, London
Grad MIPE	Graduate Member of the Institution of Production Engineers, London.

APPENDICES

A CLASSIFIED STATEMENT OF ENGINEERS

Volume I of the National Register comprising of Engineers — Parts I & II contain 8,200 entries as detailed below :

Civil Engineers	Senior	2,050
Civil Engineers	Junior	1,107
Electrical Engineers	Senior	704
Electrical Engineers	Junior	573
Mechanical Engineers	Senior	787
Mechanical Engineers .. .	Junior	739
Electrical & Mechanical Engineers .	Senior	728
Electrical & Mechanical Engineers ..	Junior	573
Chemical Engineers . .	Senior	206
Chemical Engineers .. .	Junior	49
Mining Engineers	..	114
Marine Engineers	.	47
Automobile Engineers	..	88
Aeronautical Engineers	..	97
Communication Engineers	..	338

Out of the total number of Engineers so far registered with the National Register :

4,859 are employed in Central and State Services including Defence Services,

99 employed in Semi-government Services,

1,642 employed or engaged in Industry,

552 engaged in Teaching profession,

599 unemployed.

ENGINEERING ORGANIZATIONS AND SOCIETIES IN INDIA

ORGANIZATIONS

1. Central Board of Irrigation, Kennedy House, Simla.

Its name is being changed to Central Board of Irrigation and Power.

Consists of Irrigation and Hydro-electric Chief Engineers of all administration in India including Ceylon and Burma.

History: Organized in 1931.

Purpose: To establish contacts with institutions and individuals in India and abroad; to collect, supply information and co-ordinate research on irrigation, hydro-electric and allied subjects.

Meetings: Annual.

Research Funds, Medals, etc.. C.B.I. medal awarded annually to a worker or an author of papers of outstanding merit for distinguished attainment in irrigation engineering.

Library: About 100,000 books on irrigation, hydro-electric and allied subjects in India.

Publications: Annual report (Tech.); a two-monthly journal; popular series of leaflets and special publications on specific subjects

2. Central Building Research Institute (Council of Scientific & Industrial Research), Roorkee.

At present the Engineering and Scientific staff includes one Director, two Senior Scientific Officers, one Junior Scientific Officer and eight Technical Assistants, and more persons will be appointed according to the expansion of the organization.

History: Organized in May, 1949 (although the Building Research Unit, nucleus of this Institute was functioning since 1947).

Purpose: This Institute is intended to undertake the study and improvement of, (a) materials used for constructional purposes, (b) the design and comforts in buildings, and (c) building practices and the technique of production and assembly of materials.

Meetings: Frequent.

Library: Books and journals on applied physics, chemistry, concrete and structural engineering, soil mechanic and foundation engineering.

Publications. Annual reports; technical and research papers.

3. Central Electricity Commission, Cleremont, The Mall, Simla.

Commission consists of a Chairman, two full time Members and ex-officio members.

History: The Commission was constituted on the 1st March, 1948, by amalgamation of the office of the Electrical Commissioner with the Government of India and the Central Technical Power Board, excluding the hydro-electric section of the latter.

Purpose: The Commission is charged with the general responsibility for co-ordinating and furthering all schemes of electric power development, transmission and utilization of electricity throughout the country in consultation with the State Government concerned.

Library: Nearly 10,000 books and periodicals.

Publications: Public Electricity Supply—All India Statistics—yearly. Number of books published on Public Electricity Supply.

4. Central Public Works Department (under Ministry of Works, Production & Supply), 'L' Block Hutments, New Delhi.

Establishment has two Chief Engineers, one Additional Chief Engineer, fifteen Superintending Engineers, Seventy-three Executive and Electrical Engineers, two hundred and seventy-five Assistant Executive Engineers both civil and electrical, fifteen Senior and Junior Architects and an adequate technical and administrative staff.

History. Formed first in 1912, and made permanent in 1932; included the Department of Civil Aviation Wing in May 1946.

Purpose: To construct and maintain Central Government Buildings (excluding military works), aerodromes and roads, civil works of

Central Government and some of the Chief Commissioners' States, excluding National Highways and River Valley Projects; to look after Estates and to collect rents.

Meetings: The Chief Engineer holds fortnightly meetings of all the local Superintending Engineers and Executive Engineers in New Delhi Whitley meeting is also held occasionally by the Chief Engineer wherein representatives of different categories of staff are invited

Library: 3,309 books mainly on buildings, bridges, hydraulics, sanitary and water supply, roads, railways, horticulture and aerodromes.

5. Central Road Research Institute (Council of Scientific & Industrial Research), Delhi-Mathura Road, Delhi.

At present the Engineering and Scientific staff includes a Director, two Assistant Directors, four Senior Scientific Officers, one Junior Scientific Officer, eight Technical Assistants and one Mechanical Engineer; and more persons will be appointed according to the expansion of the organization.

History: Started functioning since Sept., 1950

Purpose: To conduct fundamental and applied research on road materials and road construction, testing and standardization of specifications for roads; devising suitable instruments for various tests such as measurement of irregularities of road surfaces, impact factors, automatic recording of traffic, etc.; tests on soils and study of soil mechanics with a view to evolve low cost roads for development of all-weather village roads; studies on the behaviour of roads under different traffic conditions; incidence of accidents, road safety devices and road statistics; dissemination of information and training of technologists.

Meetings: Twice a year.

Library: About 500 books and 50 periodicals on highway engineering and research, concrete, structural engineering, applied physics and chemistry.

Publications: Annual reports; technical and research papers.

6. Central Standards Office for Railways (Railway Board), 'N' Block—Raisina Road, New Delhi.

Consists of a Chief Controller of Standardization assisted by selected deputies and Assistant Chief Controllers and Research Officers who specialise in civil or mechanical design and research work including electrical, metallurgical and chemical research.

History: Set up in 1929-30.

Purpose: To prepare and supply Indian Railways, Standard drawings and specifications for all equipment and material used by railways in India; to conduct and co-ordinate research in mechanical, civil, electrical, metallurgical and chemical engineering, fuel and housing problems of railways; to function as Consulting Engineers in respect of railway problems in the field of engineering and research.

Meetings. Various Railway Standards Committees are convened by this office annually.

Library About 2,220 volumes on general mechanical engineering and electrical engineering, metallurgy, carriage and wagons, railway track signalling and inter-locking, locomotives, civil and structural engineering.

Publications· Quarterly Technical Bulletin; Quarterly Notification; I.R.S. Standard specifications; Standard drawings; I.R.S. codes of practice; Annual reports of the Standards Committees on various subjects.

7. Central Water Power, Irrigation and Navigation Commission, Ministry of Natural Resources and Scientific Research, Central Secretariat, New Delhi.

The Commission consists of a Chairman and three full-time Members, and necessary technical and administrative staff and specialists to carry out its duties.

History: First constituted in April, 1945 and later in January, 1948.

Purpose: To make necessary investigations and prepare schemes, designs, undertake construction work, to conduct research for development of river valleys in respect of hydro-electric power generation, irrigation, navigation, flood control, soil conservation on an All India basis; to advise the Government of India in respect of water and water-power rights; to collect and publish data relating to water-power, water ways, rain-fall,

run-off silting of reservoirs, etc.

Meetings: Weekly.

Library: (Same as C.B.I.). About 100,000 books on irrigation, hydro-electric and allied subjects.

Publications: Popular leaflets.

8. Corps of Engineers, Kashmir House, New Delhi.

The Head of the Corps is the Engineer-in-Chief and there are three Chief Engineers, one in each Military Command.

History: Raised in 1780 and is based on three groups—the Madras Group at Bangalore, the Bengal Group at Roorkee and the Bombay Group at Kirkee.

Purpose: Engineering works services, survey and transportation; design and construction of buildings, roads, docks, airfields, electrical and water supply and other installations required by the armed forces and for certain major civil projects; control of these works and to impart technical training to engineer troops.

Meetings: Conferences of all Chief Engineers and Commands are held twice a year.

Library: Books relating to engineering subjects.

There is in addition a small Engineer Research Station at Kirkee which deals with research and development problems of military engineers.

9. Damodar Valley Corporation, Anderson House, Alipore, Calcutta.

Consists of a Chairman, two Members and adequate technical staff.

History: Founded in July 1948.

Purpose: The promotion and operation of schemes for irrigation, water supply and drainage; generation, transmission and distribution of electrical energy; flood control in the Damodar River and its tributaries; the promotion of afforestation and control of soil erosion; the promotion of public health and the agricultural, industrial, economic and general well-being in the Damodar Valley and its area of operation.

Publications: No periodical publication, but a number of reports, books and pamphlets are published on Damodar Valley Project.

10. Hyderabad Engineering Research Laboratories, Hyderabad-Deccan.

Administered by a Governing Body of which the President is the Minister of Public Works and the members include the Finance and other concerned Ministers and the Secretary, P.W.D. The Director is the Executive Officer of the Governing Body and acts as its Secretary. Associated with it is Engineering Research Board including all the Chief Engineers with the Secretary, P.W.D. as Chairman.

History: Started in 1945.

Purpose: To solve the specific problems of all the Engineering Departments of the State; to carry out what may be called 'Research for the Masses for improving the living standards of common people by simple and cheap but scientific methods connected with irrigation projects, roads, buildings and public health engineering; testing of materials; to impart training in soil mechanics

Library Books on irrigation, water-power, water-supply, roads, hydro-meteorology, soil mechanics, public health engineering and engineering statistics

Publications· Research papers at intervals

11. Indian Roads Congress, Jamnagar House, Shahjehan Road, New Delhi.

Has a President, three Vice-Presidents, a Treasurer and a Secretary.

History: Owes its origin to the Indian Roads Development Committee appointed by the Government of India in 1927; finally inaugurated in December, 1934.

Purpose: To promote and encourage the science and practice of the building and maintenance of roads; to provide a channel for the expression of the collective opinion of its members on matters affecting roads; to promote the use of standard specifications and to propose specifications and to advise regarding education, experiment and research connected with roads.

Membership: Ordinary, annual subscription Rs. 25; Associate, Rs. 120 and Honorary; total 1,300, including members residing in U.S.A., U.K., Ireland, British West Indies, Canada, Pakistan, Ceylon and Burma.

Meetings: Annual.

Research Funds, Medals, etc.: Mitchell Medal awarded for exceptionally good paper contributed to the Congress Journal, and Indian Roads Congress Medal for a paper considered to be more than the average standard.

Library: About 2,000 volumes mainly concerning Civil Engineering with particular emphasis on highways, bridges and transport.

Publications: Journal of Indian Roads Congress — quarterly; Transport Communications monthly review; bulletins on matters of highway interest.

12. Planning Commission, Government of India, Government House, New Delhi.

Comprises of a Chairman, a Deputy Chairman, four Members, a Secretary and an adequate technical and administrative staff.

History: Organized in March, 1950.

Purpose: To make an assessment of the material, capital and human resources of the country including technical personnel, and to investigate the possibilities of augmenting such of these resources as are found to be deficient in relation to the nation's requirements; to formulate the Plan for the most effective and balanced utilization of the country's resources and determine the conditions for the successful execution of it; to determine the nature of the machinery which will be necessary for securing the successful implementation of each stage of the Plan in all its aspects and to appraise from time to time the progress achieved; to make such interim or ancillary recommendations as appear to it to be appropriate either for facilitating the discharge of the duties assigned to it, or on a consideration of the prevailing economic conditions, current policies, measures and development programmes or on an examination of such specific problems as may be referred to it for advise by Central and State Governments.

Library: Nearly 1,500 books on economics, industry, planning, agriculture and social sciences.

Meetings: Frequent.

13. Research & Development—Civil Aviation Department, Talkatora Road, New Delhi.

History: Organized in April, 1946.

Purpose: Investigation of scientific and technical problems relating to airworthiness and safety in operations, design approval of civil prototype aircraft for issue of airworthiness certificate, co-ordination of development of aircraft materials of indigenous origin and their standardization, the promotion of development work on gliders, sailplanes and light aircraft and in general the study of current developments in aviation technology and their application to civil aircraft operations in India.

A Technical Development and Co-ordination Centre provides research and test facilities.

Library: It is proposed to build up an up-to-date library of aeronautical standards and specifications and of technical data relating to aircraft and operations.

Publications: Technical notes, bulletins and data sheets are published from time to time.

14. Roads Organization of the Ministry of Transport, Jamnagar House, Shahjehan Road, New Delhi.

History: First created in 1930 as the office of the Special Chief Engineer, afterwards Consulting Engineer to the Government of India (Roads), expanded in 1935 and during World War II.

Purpose: To administer the Central Road Fund and distribute it equitably to the various States for works approved by the Government of India; to regulate and provide funds for the construction and maintenance of National Highways; to secure balanced development of roads and road transport and to co-ordinate with other systems of transport, principally railways and motor transport; to collect, compile, analyse and interpret road statistics covering all aspects of road development; to draw up standard specifications and designs for bridges and roads; to foster road research and to co-ordinate and disseminate the results of road research work done by the various authorities and administrations in India; to improve the technical knowledge and experience of the highway engineering personnel by sponsoring the training of engineers in India and abroad, by disseminating information on standards and modern engineering techniques, and to advise

the State Governments in the procurement and the use of road-making machinery, including fostering of their manufacture, especially of road rollers in this country.

The Government of India have used the Indian Roads Congress as an agency for attaining many of these objects.

15. State Public Works Department.

The Public Works Department is responsible for the maintenance, design and execution of projects relating to irrigation, electricity, buildings and roads, and public health.

Irrigation—It is completely under the control of the State Governments and at present every administrative unit is competent to utilize in whatever way it likes, the waters which run through its territories though claims of adjoining concerned States are kept in view. In all States of India except Assam, Kashmir, Saurashtra, Vindhya Pradesh, Union of Travancore & Cochin and Bhopal there are distinct and separate departments to deal with irrigation. In these departments the unit of management is the Division, under an Executive Engineer. This is sub-divided into sub-divisions, under a Sub-divisional Officer who is responsible to the Executive Engineer for the efficient and proper working of his sub-division. A number of divisions, usually three to six, form a circle under the administrative control of a Superintending Engineer and the head of all is the Chief Engineer, of whom there may be one or more in each State according to the extent of the irrigation works. In addition, some administrations have their separate design offices and irrigation research stations to design and deal with the day-to-day problems in connection with the maintenance and improvements of existing projects and execution of new projects. There are at present eight irrigation research stations, *viz.*, Punjab Irrigation Research Institute (Punjab I), Uttar Pradesh Research Circle (Uttar Pradesh), River Research Institute (West Bengal), Irrigation Research Station and Soil Mechanics and Concrete Laboratories (Madras), Hydraulic Research Station, Krishnarajasagar (Mysore), Hyderabad Engineering Research Laboratories (Hyderabad), Poona Irrigation and Research Division (Bombay) and Central Waterpower, Irrigation and Navigation Research Station (Government of India).

With the setting up of the Central Waterpower, Irrigation and Navigation Commission and with the passing of the Waterways Act, which is at present under the active consideration of the Government of India, every State will be required to submit all the schemes relating to rivers which lie in more than one administration, for examination by a Central Authority, which will ensure that development in all units fits in with the regional development of a particular river system.

Electricity: The administrative set up of electricity department in the States is similar to irrigation. There are at present separate Chief Engineers for electricity in Punjab, Bombay, Bihar, Orissa, Madras, Madhya Pradesh, Hyderabad, Mysore, Kashmir, and Union of Travancore & Cochin.

The Government of India under the Electricity Act, 1945, have constituted a Central Electricity Authority which will develop a sound, adequate and uniform national power policy and particularly co-ordinate the activities of the planning agencies in relation to the control and utilization of national power resources. Under the Act the State Governments are required to set up State Electricity Boards who will be charged with the general duty of promoting the co-ordinated development of the generation, supply and distribution of electricity within the State in the most-efficient manner. In addition there are CWINC (already described) and Central Electricity Commission, two strong technical organizations at the Centre.

Buildings and Roads Branch: The set up of administration for the Buildings and Roads Branch is similar to Irrigation Departments. The Corporation, Municipalities and District Boards have their separate engineering organizations for the construction and maintenance of roads, buildings, etc., which are within their jurisdiction.

Public Health: In some States there are separate departments to deal with the public health works while in others this work is also being done by the Buildings and Roads Departments.

SOCIETIES

1. Builders' Association of India, United India Building, Sir Pherozshah Mehta Road, Fort, Bombay-1.

Conducted by a committee, consisting of a President, a Vice-President, Hon. Secretary, Hon. Treasurer and three members, elected annually.

History: Established in 1941.

Purpose: To encourage co-operation and friendly relations amongst Builders in general and members of the Association in particular; to watch, support, protect, extend and defend the rights of the members; to devise means and methods for promoting friendly relations with the suppliers of materials, to try to settle by arbitration or otherwise disputes between members of association if both parties are agreeable; to take into consideration all other questions as may be conducive to the attainment of the aims and objects of the association.

Membership: It is open to persons, companies and firms connected with construction works of any kind including Electric and Sanitary and with businesses or trades connected with the building trade. Entrance fee Rs. 250 and annual subscription Rs. 120.

Meetings: Managing Committee Meetings are held monthly and that of General Body, every two months.

Library: Books on engineering, building construction and other allied subjects.

2. Indian National Society of Soil Mechanics and Foundation Engineering, Kennedy House, Simla.

History: Organized in July 1947.

Purpose: To encourage the study of the subject of Soil Mechanics and to devise ways and means, to ensure uses of it; to provide liaison between its members in India and the International Society on Soil Mechanics and Foundation Engineering.

Membership: 30 co-operate members and 148 individual members, annual subscription of Rs. 13-8.

Meetings: Annual.

Publications: Annual reports.

3. Madras Engineering Association, P.W.D. Buildings, Chepauk, Madras-5.

Has a President, a Vice-President, a Secretary, and a Joint Secretary-cum-Treasurer.

History: Founded in 1910.

Purpose: To establish contacts with all individuals of the Madras Department of Public Works; to exchange information of technical knowledge; to collect and supply information on irrigation projects, hydro-electric and other allied subjects.

Membership: About 500 from the executive staff of the Public Works Department in Madras State.

Meetings: Almost monthly and at closer intervals.

Library: Books on building and architecture, reinforced concrete construction, sanitary engineering, hydraulics, irrigation, town planning, electrical engineering, railway engineering and mechanical engineering.

Publications: Annual Diaries containing important tables referred by Field Engineers, and 'Engineers Hand Book.'

4. The Federation of Electricity Undertakings of India, Killick Building, Home Street, Bombay.

Committee consists of a Chairman, a Secretary and five members.

History: Founded in February 1943.

Purpose: To promote, protect and assist the rights and interests of its members and Licensees in India; to give the Government of India, State Governments, Municipalities and other Local Authorities, facilities for conferring with and ascertaining the views of the Electric Supply Industry, as regards matters directly or indirectly affecting and to negotiate with them; to effect improvement in the administration and for the betterment of the Industry; to collect and circulate statistics and other information relating to the Electricity Supply Industry.

Membership: There are no different classifications of membership. The subscriptions vary from year to year according to the requirements of the Federation budget. Through the six State Electrical Associations (Bombay, Bengal, Bihar and Orissa, U.P. & Delhi, Madras, C.P. & Berar)

which constitute its membership, 177—Electric Supply undertakings are affiliated to the Federation.

Meetings: According to exigencies of business demand.

Library: A few representative technical magazines on the Industry.

Publications: Monthly News Letter.

5. The Indian Institute of Architects, Prospect Chambers Annexe, Hornby Road, Fort, Bombay.

Council has a President, a Vice-President, two Honorary Secretaries, Honorary Treasurer and seven Ordinary Members.

History: Founded first in 1917 by students of the Architectural Section of the Bombay School of Art and named as Architectural Students Association; changed the name to Bombay Architectural Association in 1922. It was allied to the Royal Institute of British Architects, London in 1925. Name changed again to present title in 1929.

Purpose: To encourage the study of architecture; to elevate the standard of architectural practice and by mutual support to promote the interests of Architects throughout India.

Membership: Fellows, Associates and Subscribers; total about 350.

Meetings: Monthly.

Examinations: Under the auspices of the Institute the R.I.B.A. Examination Board in India conducts Final and Special Final Examinations in Architecture.

Publications: The Journal of the Indian Institute of Architects (Quarterly).

Library: The Sohrab F. Bharoocha Architectural Library contains many books on architecture.

6. The Indian Roads and Transport Development Association Ltd., 27, Bastion Road, Fort, Bombay.

Council has a President, a Vice-President and eleven Members.

History: Association was founded in 1926 and registered in October 1927. Branches at Calcutta, Bombay, Madras, Nagpur, New Delhi, Gauhati.

Purpose: To promote the development of transport of any kind including Road, Motor and Air Transport throughout India by making representations to the Government of India, Governments of Provinces, District Boards and other Public Bodies concerned, regarding the construction, improvement and maintenance of roads, bridges, aerodromes, etc.; to make representations to all or any of the bodies regarding the adjustment of taxation, customs duties and excise affecting motor vehicles and other modes of transport and the employment of same in such a manner as to facilitate the development of transport throughout India; to educate the public by means of propaganda and to create authoritative public opinion with regard to the needs of, and advantage to be derived from, improved road and air communications and the use of these forms of transport.

Membership: Associate, annual fees Rs. 5, ordinary, Rs. 10; Life, Rs. 100; Supporting, Rs. 300. Total membership 700.

Meetings: Central office of the Association and each branch holds a general meeting annually and managing committees meet at regular intervals.

Library: 200 books on roads and transport.

7. The Institution of Engineers (India), 8, Gokhale Road, Calcutta-20.

History: Established in 1920; and incorporated by Royal Charter in 1935. Centres; Calcutta, Bombay, New Delhi, Simla, Lucknow, Madras, Hyderabad Dn., Mysore, Patna, Nagpur, Travancore and Karachi.

Purpose: To promote and advance the science practice and business of engineering in all its branches; to diffuse among its members information on all matters affecting engineering; to promote the study of Engineering with a view to disseminate the information obtained for facilitating the scientific and economic development of Engineering in India; to encourage, regulate and elevate the technical and general knowledge of persons engaged in engineering; to give the Government of India and State Governments and other Public Bodies facilities for conferring with and ascertaining the views of Engineers as regards matters directly or indirectly affecting Engineering.

Membership: Full Member, annual subs-

cription Rs. 50; Associate Member, Rs. 40; Companion, Rs. 40; Student, Rs. 15; Subscriber, Rs. 50. Total Membership 6,934. Membership list issued.

Research Funds, Medals, etc.: President of India Prize, a cash award of Rs. 500; Railway Board's First Prize, with one gold medal and cash of Rs. 250; Railway Board's Second Prize, a cash of Rs. 250; given to the authors for an outstanding contribution to the journal

Meetings: Annual.

Library: About 2,000 books and periodicals on applied science, engineering science, general mechanics, mining engineering, electrical communication, naval engineering, civil engineering, roads and railways, architecture, hydraulic engineering, river engineering. Centres also maintain libraries.

Publications: The Journal of the Institution of Engineers (India)—quarterly.

8. The Institution of Military Engineers (India), Kashmir House, New Delhi.

Council consists of a President, a Vice-President, a Secretary and a Treasurer; the latter two to be nominated from E.-in-Chief's Branch by the Council which consists of 13 members of different commands and 4 Ex-Officio members besides the President and the Vice-President

History: Founded in 1948.

Purpose: Dissemination of information of a professional character among its members for the general advancement of the Science of Military Engineering both historical and scientific and to promote the welfare of members of the institution in every possible way

Membership: Regular, annual fees Rs. 10; Associate, Rs. 10; and Honorary, total membership 596. Membership list issued.

Meetings: The Council meets annually while the Executive Committee holds quarterly meetings.

Research Funds, Medals, etc.: Three prizes awarded annually for Bewoor Prize Essay, open to members only.

Publications: 'Journal of the Institution of Military Engineers'—quarterly; pamphlets on subjects of interest to Military Engineers.

Library: A library is to be shortly instituted.

9. The Institute of Surveyors (India), 122, Kashmir House, King George's Avenue, New Delhi.

Council consists of a President, a Vice-President, a Secretary, a Treasurer and 11 members.

History: Organized in 1950.

Purpose: To promote the science and practice of Land Surveying and Building and Quantity Surveying; to advise Government and other bodies; improve, extend and elevate the technical and general knowledge of the persons engaged in surveying; to promote the maintenance of high professional standards and appointment of Boards of Arbitrators as and when necessary.

Membership: Ordinary, annual subscription Rs. 40; Associate, Rs. 30; Probationer, Rs. 20 and Student, Rs. 10; total membership 84. Membership list issued.

Meetings: Annual and bi-monthly.

Awards: Diploma of Corporate Membership.

Library: Is being built up.

10. The Mechanical Engineers' Association (India), 343, Satar Building, Grant Road East, Bombay.

History: Started in 1914.

Distributed in 20 Local Centres in India and abroad.

Purpose. To promote the general advancement of engineering science (civil, mechanical, electrical, etc.) and its application in India; to facilitate the exchange of views and ideas regarding allied subjects amongst members and persons attached to the association; to maintain local centres in several important states and thus ensure each individual member being given equal opportunity to enjoy the rights and privileges of the Association in all engineering matters.

Meetings. Annual conference

Membership: Over 3,000.

Research Scholarships, Medals, etc.: Gold medals, cash prizes awarded for the best papers read at the conference.

Publications: Journal 'The Engineer'—monthly.

11. The Mysore Engineers' Association, Post Office Road, Bangalore-1.

Has a President and a Honorary Secretary.

History: Established in 1863.

Purpose : To establish contacts with all individuals of the Mysore Department of Public Works to exchange information of technical knowledge; to collect and supply information on irrigation projects, hydro-electric and other allied subjects

Membership · Member, annual fees Rs. 12; Student member, Rs 6; Companion and Associate, Rs 24; total membership 230.

Meetings : Annual.

Library . About 3,500 books on building and architecture, reinforced concrete construction, sanitary engineering, hydraulics, irrigation, town planning, electrical engineering, railway engineering and mechanical engineering.

Publications · Annual Bulletin containing proceedings of professional papers.

TECHNICAL EDUCATION IN INDIA

By L. S. CHANDRAKANT

Expansion and development of facilities for technical education is the sheet-anchor for all plans of economic development. The problems of technical education and training facing India can be appreciated only against the background of existing facilities and the large requirements for technical man-power The present position may be presented under three major heads, namely, Post-graduate or Advanced Training, Under-graduate Training, and Junior Training, corresponding roughly to the three stages in technical education.

Post-Graduate Training—It may be admitted at the outset that facilities for post-graduate or advanced technical training in the country are extremely limited This is so both in the range of subjects and the number of institutions. There are only five institutions in the whole country which impart education up to post-graduate standard Even their range of subjects is limited. Only one institution offers post-graduate courses in Aeronautical Engineering, Metallurgy, Internal Combustion Engineering and Power Engineering. Two do so in Chemical Technology and in Applied Physics Most of these post-graduate courses have been started fairly recently and the Departments are, generally, in a formative stage. The institutions are, however, fast developing into active centres of post-graduate training in technology. The Indian Institute of Science, Bangalore, where training and research in Aeronautical Engineering, Metallurgy, Internal Combustion Engineering and Power Engineering are being organized at considerable cost, deserves special mention.

Under-Graduate Training—The most important aspect of technical education in India is under-graduate training. In striking contrast to post-graduate training, this has developed to a considerable extent, especially in the three basic branches of engineering—Civil, Mechanical and Electrical. There are about 25 Engineering Colleges in the country. Affiliated to an Indian University, each offers degree courses in Civil, Electrical and Mechanical Engineering Recently, Chemical Engineering courses have been organized in 4 institutions, Electrical Communication Engineering in 2, Metallurgical Engineering in one and Highway Engineering in one The degree courses vary between 3 and 4 years The minimum admission qualification is Intermediate in Science with Physics, Chemistry and Mathematics. The standard curriculum and syllabuses of the courses generally conform to the pattern of corresponding courses in the United Kingdom. There is, however, little scope for specialization in the numerous branches of engineering at the under-graduate stage The existing system may, therefore, be regarded as relating mostly to general engineering education in the three basic branches

The development of facilities for training in other technological subjects has not kept pace with training in engineering subjects. These are limited both in the range of subjects and in the number of institutions providing such facilities. There are only 8 first-grade institutions in the country teaching technological subjects up to the degree or under-graduate standard. Three of them offer courses in Chemical Technology, two in Oil Technology, one each in Ceramics, Glass, Pharmaceutics, Metallurgy and Leather, two in Mining and three in Textile Technology These courses also closely follow corresponding courses in British Universities.

Junior Technical Education—Junior Technical Education in India covers courses of technical training after Matriculation or High School stage. They extend over periods varying between 3 and 4 years and lead to a diploma or a certificate awarded by Boards of Technical Education of Governments of Provinces or Indian States or

authority like Universities These courses are of a lower standard than University degree courses and seek to give necessary academic training to potential overseers, foremen, chargemen and other categories of supervisory personnel. This type of training has shown satisfactory progress Nearly 50 institutions distributed all over the country are engaged in imparting instruction up to the diploma or certificate standard in a fairly wide range of subjects. Besides the basic engineering subjects various other branches of engineering and technology, as for instance, Automobile Engineering, Radio Engineering, Leather Technology, Textile Technology, Sanitary Engineering, Fisheries, Navigation, Cinematography, Sound Engineering, Food Technology, etc, are taught at the institution.

The following table indicates the growth in the number of technical and engineering students:

Standard of Training	Out-turn in 1946-47	1949-50	In-take during 1947-48	1950-51
(a) *Engineering*—				
Degree and post-graduate courses	950	1,429	2,520	3,210
Diploma courses	1,150	1,166	3,150	3,094
(b) *Technology*—				
Degree and post-graduate courses	320	486	420	915
Diploma courses	290	271	510	765

Training facilities at all standards and levels have thus increased considerably in recent years. The progress is due to the establishment of new and increased institutions as well as due to in the intake of established institutions The increased intake will not only be maintained in the coming years but is likely to be further increased

Present Handicaps and Problems—A review of present facilities would be incomplete without a reference to existing handicaps All the technical institutions in the country suffer from lack of equipment, or lack of adequate accommodation, or lack of adequate staff, or all the three. This state of affairs is due to two main factors. Well-established institutions which have increased their normal intake have not always been able to expand their facilities correspondingly. The new institutions have been progressing rather slowly, mainly due to lack of funds. The available facilities in respect of equipment, staff, teaching accommodation, etc, in many institutions fulfil only 50 per cent of the minimum requirements. This unsatisfactory state of affairs is also having an adverse effect on the standard of training.

The problem confronting the country is, therefore, the strengthening of existing facilities in technical institutions by equipping and staffing them adequately for the present intake of students and bringing up the standard of training to the desired level The various shortages have also retarded the growth of technological research. The teaching staff of almost all the institutions are burdened with routine teaching and have little time for research This is also one of the reasons for lack of research development. This state of affairs has created a second problem, namely, how to give an impetus to technological research in our institutions. These and other problems are now engaging the country's attention

Co-ordination and Standardization of Technical Education—Until recently, the development of technical education in India has been largely unco-ordinated Each institution has had absolute freedom to organise and conduct whatever courses of training it chose. Standards have also differed and there has been little reference to the country's requirements for trained personnel. Each institution should, no doubt, have academic freedom to develop according to its own genius. Overall, development of technical education in the country must, however, be well co-ordinated and should proceed according to a plan designed to achieve the best results. To achieve this the Government of India set up in 1945 an All-India Council for Technical Education to advise generally on the effective organization and planning of technical education in the country. The Council consists of 64 members, representing the various Ministries of the Government of India, the Central Legislature, Provincial and State Governments, Commerce, Industry, Labour, Professional Associations, Educational interests, etc., and has the following functions:

(i) to survey the whole field of technical

education in consultation with Provincial Units; and

(ii) to consider all immediate projects for the development of technical education; and

(iii) to conduct preliminary investigations with a view to ascertaining the conditions on which the authorities in control of existing institutions would be prepared to co-operate in All-India schemes.

During the short time it has been in existence, the Council has, made considerable progress towards standardization of technical education in the country and improvement and expansion of existing facilities. For the standardization of technical education, the Council has set up 6 All-India Boards of Technical Studies in the main branches of Engineering and Technology. The All-India Boards have now framed, standardized courses on an All-India basis in Civil, Mechanical and Electrical Engineering, Metallurgy, Commerce and Business Administration, Architecture, Regional and Town Planning, Textile Technology, Applied Art, Chemical Technology and Chemical Engineering. In all the above subjects the Boards have framed courses of different types and standards to meet the requirements for different categories of personnel for the development of industries, for the execution of various national reconstruction projects of Governments, Commerce, etc The various courses may be viewed as components of a continuous spectrum at one end of which are the courses of highest standards, corresponding to post-graduate training and at the other the lowest standards, corresponding to the training of foremen, artisans and craftsmen.

One important feature of the courses is that they might be conducted by an institution either on full-time or on part-time basis. They lay great emphasis on practical aspects of training which unfortunately is not the case with the existing systems of training. The object of the part-time courses is to enable those who are already employed in industry, Government Departments, etc., or without any academic qualifications, to equip themselves on the academic side and thus provide necessary training facilities for under-privileged persons The All-India courses have now been introduced in a number of institutions in the country. It is expected that the basic standards prescribed by the Council will be soon adopted by all the institutions including Universities.

The problem of improvement and expansion of existing facilities for technical education in the country has been referred to earlier The serious handicaps from which technical institutions are suffering have also been indicated The Council has taken the first step towards solving this problem by suggesting suitable measures for the improvement of the institutions The most important of these measures is a scheme of giving suitable financial assistance to technical institutions for their improvement and expansion, especially by way of staff, equipment and teaching accommodation The scheme, as accepted by Government of India, entails a non-recurring expenditure of over Rs 15 million and a recurring expenditure of about Rs 3 million

The All-India Council's task has been difficult as the Council has to depend on the co-operation of all educational interests in the country to bring about agreement between different points of view for concerted and co-ordinated effort. Substantial progress has been made in the last few years but much still remains to be done

Development Plans for Technical Education and Research—India's requirements for scientific and technical man-power during the next 5-10 year period have been estimated at about 54,000 Engineers and 20,000 Technologists, whereas the existing resources are hardly capable of meeting 50 per cent of the requirements It is obvious that there are very wide gaps between the country's requirements for trained personnel and her potential capacity in respect of training facilities—gaps which are not only quantitative but qualitative in character In an article on "Scientific Manpower", some of the requirements and inadequacies have already been indicated If steps are not taken now to develop training and research facilities on a scale commensurate with the needs of the country, the situation might

become well past remedy. Several important development plans have, therefore, been prepared and some of them are in the course of execution. The most important project is the establishment of four Regional Higher Technical Institutions on the lines of the Massachusetts Institute of Technology.

Higher Technical Institutions—In view of the certainty of a very large increase in the demand for higher specialists in industries and other fields, a rapid expansion in the facilities for higher technical education is a pressing necessity. The calls of reconstruction in Europe and elsewhere and the enormous industrial and Government undertakings contemplated in Europe and America will make it difficult, if not impossible, to secure from abroad the services of the right type of engineers, architects, technologists, planners, etc., to carry out India's economic development projects The initiation of a programme of higher technical education and research in India should, therefore, be pushed forward with the utmost speed and determination. The Government have, therefore, approved of the establishment of four Regional Higher Technical Institutions in the country. It is proposed to begin with two such institutions—one in the Eastern zone and the other in the Western zone Later two more—one in the Southern zone and one in the Northern zone—are also to be established. It is proposed that each of these institutions will provide for training and research in a wide range of technical subjects and cater for 3,000 under-graduate and post-graduate students and research workers. The Eastern and the Western Higher Technical Institutions would provide training in the following subjects :—

Eastern Higher Technical Institution

(a) *Basic or under-graduate courses*.
- Aeronautical Engineering.
- Chemical Engineering.
- Civil and Sanitary Engineering
- Electrical Engineering.
- Mechanical Engineering
- Architecture (Building Construction and Town Planning).
- Metallurgy.
- Botany
- Geology and Geophysics.
- * Industrial Administration, Industrial Hygiene & Economics.
- * Humanities.
- * Chemistry.
- * Physics.

(b) *Post-graduate courses* :
- Fuel Engineering or Technology
- Pharmaceuticals and Fine Chemicals.
- Regional Planning.
- Paper Technology.
- Glass and Ceramics (in co-operation with the proposed Glass and Ceramics Institute)
- Plastics.
- Paints and Pigments
- Hydraulic and River Research.
- Transportation (including Railway Engineering)
- Structural Engineering (including High Dams).
- Refrigeration and Air-conditioning.
- Design of Electrical Machinery.
- Automobile Engineering.
- Machine Tools.
- Design of Machinery and Instruments.
- Light Alloys
- Industrial Physics.
- Electronics (including radio engineering).
- Economic Botany.
- Geophysics, Geology, Mineralogy.
- Meteorology.
- Food Technology.

Western Higher Technical Institution

(a) *Basic or under-graduate courses* :
- Building construction and Architecture.
- Chemical Engineering.
- Civil and Sanitary Engineering.
- Electrical Engineering
- Geology and Geophysics.
- Mechanical Engineering.
- Textile Technology (including Designing).

(* It is not proposed to provide instruction leading up to a special degree in the subject)

Metallurgy.
Naval Architecture and Marine Engineering.
* Industrial Administration, Industrial Hygiene and Economics.
* Humanities.
* Mathematics and Statistics.
* Physics.
* Chemistry.
* Botany.

(b) *Special subjects*
Regional Planning.
Pharmaceuticals and Fine Chemicals (in co-operation with Bombay University, if possible)
Cellulose Industries (in co-operation with Bombay University, if possible)
Plastics, Paints and Pigments
Dye Chemistry.
Food Technology.
Transportation (including Railway Engineering).
Structural Engineering (including High Dams)
Design of Electrical Machinery.
Refrigeration and Air-conditioning
Design of Machinery and Instruments.
Textile Engineering.
Textile Manufacturing
Textile Chemistry (in co-operation with Bombay University, if possible)
Light alloys.
Naval Architecture and Marine Engineering.
Economic Botany.
Hydraulic and River Research

It has been decided that the Eastern Higher Technical Institution will be located at Hijli, 70 miles from Calcutta and the Western Higher Technical Institution near Bombay. Preliminary work for the establishment of the Eastern Higher Technical Institution has been completed and the Institution will shortly start functioning.

The Higher Technical Institutions will thus provide for under-graduate and post-graduate training and research in almost all the important branches of engineering and technology. The post-graduate training is intended to be advanced training of the highest type. Professors of the institutions would, therefore, have to be recognised experts in their own fields It has not been possible to find suitable Indian experts for all these posts Dependence on foreign technical experts is therefore unavoidable at least in the early stages to lay down the necessary standards and tradition Arrangements have therefore been made to recruit from abroad expert professors for these institutions wherever suitably qualified persons are not available in India.

It has been estimated that the establishment of each of the institutions would cost over Rs. 30 million non-recurring and Rs 5 million recurring.

Development of the Indian Institute of Science, Bangalore—One of the foremost centres of advanced training and research in Science and Technology in the country is the Indian Institute of Science, Bangalore. A programme of development of the various departments of the Institute has been approved and put into operation The development plan envisages—

(i) promotion of education and research in Aerodynamics and Aeronautical Designing;
(ii) expansion of research facilities in the field of Communication Engineering including Frequency Modulation, Picture Transmission, Radar and Microwave Propagation, etc.,
(iii) establishment of Gas Research Section and expansion of the Department of Internal Combustion Engineering;
(iv) development of Pure and Applied research in the field of Metallurgy,
(v) establishment of a Traction Engineering Section and expansion of teaching and research facilities in the Department of Electrical Technology;
(vi) expansion of research facilities in Food Technology, Antibiotics, Sanitation Chemistry and Food and Nutrition in the Department of Biochemistry;

(* It is not proposed to provide instruction leading up to a special degree in the subject)

(*vii*) expansion of research facilities in the fields of Nuclear Physics, Low Temperature Physics and Applied Physics;

(*viii*) expansion of facilities for fundamental research bearing on the structure of molecules in regard to synthetic fuels, high polymers and drugs; theoretical and applied electro-chemistry, utilization of Indian minerals, Photo Chemist and Synthetic Hydro-carbons and investigations on a pilot plant scale in Organic Chemistry.

The scheme for the establishment of a Department of Power Engineering at the Indian Institute of Science has also been approved for providing advanced theoretical and practical instruction. In addition, the establishment of a High Voltage Engineering Laboratory has been sanctioned to meet the needs of the electrical industry of the country

The total cost of the above plan of development is estimated at Rs 10 million non-recurring and Rs 1 million recurring

Industrial Training of Engineers and Technologists—A major problem of technical education is the provision of facilities for practical or industrial training of the large number of scientific and technical men passing out of the educational institutions This 'conditioning' is necessary for their gainful employment in industry and other scientific and technical activities The estimates of scientific and technical man-power requirements have revealed that the types of personnel required are not only large but diverse. Educational institutions would in course of time be able to impart the required basic education. The practical training of students passing out must, however, be organised at post-institutional level. Such practical training must necessarily rest with the employers, *viz.*, industry or Government departments

Employers whether Government or industry naturally prefer to employ men who have had the necessary practical training elsewhere and frequently demand that the products from the educational institutions should merge with adequate practical outlook and experience. The men with the requisite practical and theoretical training can only be turned out by the joint effort of educational institutions and industry. Unfortunately this joint responsibility has not so far been fully appreciated in the country. Urgent and far-reaching measures are therefore needed to overcome various shortcomings in the training of technical personnel and stress the significance of practical training as an integral part of a realistic system of technical education. A comprehensive long range plan which is now under consideration envisages the following measures :

(*a*) The technical departments of Governments, should organise in their establishments, facilities for the industrial training of

(*i*) the artisan type of personnel,

(*ii*) the supervisory or foreman type of personnel,

(*iii*) the executive type of personnel,

and the expenses for the organization and careful supervision of training facilities for all the above three types should be borne by Government

(b) All factories or industrial establishments, both private and State-owned, should include schemes of practical training and expenditure on this account should be regarded as legitimate expenditure of the establishment. For effective implementation of the schemes, a certain levy should, following the French system, be imposed on every industrial concern The proceeds of such levy, supplemented by Government subvention of a suitable amount, should be utilized for organizing practical training of various grades and categories of personnel in industrial concerns under Government supervision.

(c) In all the establishments where training is organized, trainees should be paid wages or stipends, the value of which in the case of scientifically or technically trained men should be adequate to meet the trainees' expenses on board and lodging

(d) Industry and Government departments

should recruit fresh graduates as officer trainees and put them through an organized training programme with a view to their ultimate appointment as executive officers.

(*e*) Suitable legislative measures should be introduced so that it becomes incumbent on every established industrial concern to provide training facilities for qualified candidates in all the grades notwithstanding whether the persons thus trained would be required by the concern or not

Government and Government-sponsored departments should provide such practical training facilities no less than industrial concerns. In every contract entered into by the Government and other establishments for the purchase of industrial machinery, plant and equipment from foreign and Indian firms, there should be a provision in the terms of purchase for the training of a suitable number of Indians in the workshops of the firms
